Okay I have a question for you to make fun of me 😊

How do I get it to use a script that i've made, if it's not the same name of one of the ones included it just says "Stalling for 60 secs"

It's js format etc, I looked in the starter and loader scripts but can't think of how to do it cause i'm too knarly.

Didn't kolton already pm you about this? because he sent me that same s/s from you.

Anyways, no one else has reported error when chicken so unless you can replicate the problem or give more details about it no one can fix it. by details not the error log, actual circumstance the error occurred in and if you can make it happen consistently

My bot works good until it gets to the boss then it just makes a tp and waits in town. Anyone know what it might be?

Figured it out. But i get this warning: [http://i1081.photobucket.com/albums/j35 ... arning.png](http://i1081.photobucket.com/albums/j35...arning.png)

nothing to worry about?

Also where do I change what items the bot will pick up and keep`? And I noticed it does my runs in like 1min. How do I chage the runs/hour so I dont get rd?

rly good job on this bot. Works rly smooth ❤️
