If this is the case, please let me know. Also, if you see any hacks that don't work for v1.12 that are still in this forum, please let me know (by posting in this thread). With HDTV you see the rain, add a top-notch surround sound system and you'll be reaching for your umbrella.

Yes, it doesn't work with v1.12. That is why it's on this list of v1.11b hacks.

[Program] KG Mule Search v. 1.5.2.0

I am working on a new version of this that won't require the InvDump.exe (which is what doesn't work).

I will let you know when it's completed.

Worked fine for me. Just have to make sure you have the new d2loader.

Okay, so I just got my 3cpo to work and I am using loader with versionhack etc. All working fine...

😬

Until, I removed my d2color hack that makes runes etc change color etc and now when I try to place an item in my inventory I get a "we got a big problem here" error. Every time!

Can any1 help me? I can give more info, just ask. 😔

okay, turned out i had a bad folder dropped in d2 folder and it was creating havoc.

so, on to my next question.

does 1280x1024 still work in 1.12 under 1.11b versionhack?

I've been trying to get it working but to no avail... any suggestions or pointing to a working res hack 1.12 would be great!

can't get fake zpickit to work, loader fails at the login screen regardless of zoid.ini config.

however, if someone knows something i dont, share!!

:: EDIT ::

Not sure what changed, but zpickit works like a charm now..? Happy Picking!
